

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at line 18 of page 2 of the specification with the following paragraph having revision marking to show changes made:

To achieve the above described object, in the first aspect of the present invention, there is provided a mobile station, comprising: transmitting means for transmitting a signal; ~~[[and]]~~ communication type determining means for determining a communication type based on a shape of the mobile station; and transmission power limit setting means for setting a transmission power limit based on said communication type ~~a shape of the mobile station~~, wherein the transmitting means transmits the signal in accordance with the transmission power limit set by the transmission power limit setting means.

Please replace the paragraph beginning at line 4 of page 3 of the specification with the following paragraph having revision marking to show changes made:

In the second aspect of the present invention, there is provided a mobile station, comprising: transmitting means for transmitting a signal; ~~[[and]]~~ interface means for interfacing with an external device; communication type determining means for determining a communication type of the mobile station in connection with said external device; and transmission power limit setting means for setting a transmission power limit based on said communication type ~~whether or not an external device is connected to the mobile station~~, wherein the transmitting means transmits the signal in accordance with the transmission power limit set by the transmission power limit setting means.

Please delete the three paragraphs beginning at line 18 of page 3 of the specification, and ending at line 5 of page 4 of the specification.

Please replace the paragraph beginning at line 6 of page 4 of the specification with the following paragraph having revision marking to show changes made:

In the ~~fourth~~ third aspect of the present invention, there is provided a communication system, comprising: ~~a mobile station and an external device connectable to the mobile station~~ one or more mobile stations, wherein at least one of the mobile station stations comprises, transmitting means for transmitting a signal; ~~[[, and]]~~ communication type determining means for determining a communication type based on a shape of the mobile station; and transmission power limit setting means for setting a transmission power limit based on said communication type ~~a shape of the mobile station~~, and wherein the transmitting means transmits the signal in accordance with the transmission power limit set by the transmission power limit setting means.

Please replace the paragraph beginning at line 16 of page 4 of the specification with the following paragraph having revision marking to show changes made:

In the ~~[[fifth]]~~ fourth aspect of the present invention, there is provided a communication system, comprising: at least a mobile station and an external device connectable to the mobile station, wherein the mobile station comprises, transmitting means for transmitting a signal; ~~[[, and]]~~ interface means for interfacing with said external device; communication type determining means for determining a communication type of the mobile station in connection with said external device; and transmission power limit setting means for setting a transmission power limit based on said communication type ~~whether or not an external device is connected to the~~

~~mobile station~~, and wherein the transmitting means transmits the signal in accordance with the transmission power limit set by the transmission power limit setting means.

Please delete the one paragraph beginning at line 1 of page 5 of the specification.

Please replace the paragraph beginning at line 13 of page 5 of the specification with the following paragraph having revision marking to show changes made:

In the ~~seventh~~ fifth aspect of the present invention, there is provided a transmission method for transmitting a signal at a mobile station, comprising the steps of: determining a communication type based on a shape of said mobile station; setting a transmission power limit based on said communication type ~~a shape of the mobile station~~; and transmitting the signal in accordance with the set transmission power limit.

Please replace the paragraph beginning at line 22 of page 5 of the specification with the following paragraph having revision marking to show changes made:

In the ~~eighth~~ sixth aspect of the present invention, there is provided a transmission method for transmitting a signal at a mobile station, comprising the steps of: interfacing with an external device; determining a communication type of the mobile station in connection with said external device; setting a transmission power limit based on said communication type ~~whether or not an external device is connected to the mobile station~~; and transmitting the signal in accordance with the set transmission power limit.

Please delete the three paragraphs beginning at line 8 of page 6 of the specification, and ending at line 20 of page 6 of the specification.
